

Abstract of the Disclosure

A modular kit of parts covers utility service lines extending from a bulkhead to a mission module. The kit includes a standard-length U-channel with a baseplate and upstanding sides. The baseplate defines one or more longitudinal slots, each of which defines a given width. A cover is provided. The kit also includes a divider having a protruding edge portion dimensioned to be accommodated in the slot. One embodiment includes a tee-shaped protrusion for use in a tee-shaped slot, and another embodiment includes a stress-reducing flange.
